

Overview

Through support from the General Electric, Northeast Utilities, and Boehringer Ingelheim Foundations, the CT Academy for Education in Mathematics, Science & Technology, Inc. maintains this directory of K-20 *science, technology, engineering, and mathematics educational activities and research programs as a resource for all Connecticut citizens.

The information represented in this directory is updated semi-annually or when we are alerted to new programs. The program descriptions come from either institutions operating programs or from grant-making organizations.

Please contact Cindi Hartshorn at chartshorn@ctacad.org if you have additional information that should be included in this directory or if included materials need to be updated.
